Keywords

Dongle, Hardlock, Parallel, USB

Symptom (public)

Problem (public)

Is it possible to attach 2 hardlocks (e.g. 1 parallel, 1 USB) with different licenses at the same time so that logiCAD/logiDOC searches for the license currently required?

Solution (public)

Using several hardlocks is subject to serious restrictions. This combination is extremely error-prone. Therefore kirchner SOFT advises against using several hardlocks with one computer. Using several licenses at the same time is only possible with softlocks using the product ID.
