Keywords

new function, feature activation, activate

Symptom (public)

Problem (public)

Will I have to send back the hardlock, when I order new functions or additional functions for logiCAD?

Solution (public)

No, new functions or additional functions can be activated by individual keys we will send you. Additional or new functions can be activated by "keys" (letter-digit-combination, also known as "signature") you get from logi.cals. According to your preferences, we can send you the signatures in a batch file (e-mail attachment) or per FAX or phone. The batch file is very convenient, because you only need to start the batch and you do not have to call a command line application and type letters and digits.
